About Me

Seasoned web designer and developer with over 8 years of professional experience in the industry.

I write clean, efficient, easily maintainable code.

Alongside the technical tools in my belt I have considerable experience in customer service, SEO, Sales and Marketing, and product development. Having run my own business and worked for others, I understand the importance of meeting business needs, deadlines, and ROI.

For the past two years I worked for a small startup company based out of Dallas, Texas, creating a cloud-based CMS software as a service(SaaS). My responsibilities included: maintaining and building HTML/CSS/JS in an angular application, end to end testing, product development and QA, managing marketing material and websites, writing technical documentation and blogs, live customer service, demo and sales calls, building and maintaining CMS themes and client websites on the platform, and maintaining static legacy sites.

Experience

Governor LLC, Dallas, Texas — Sr. Frontend Developer

April 2015 - PRESENT

Governor is a SaaS start-up based out of Dallas, Texas. I helped develop the CMS platform, manage the marketing site and worked on customer integrations and acquisitions.

Mastercraft Creative, Hollywood, Florida— Owner

Jan 2013 - April 2015

Mastercraft creative was a small web agency I started and ran for two years performing freelance work to servicing South Florida small businesses.

BPI Sports, Davie, Florida— Sr. Frontend Developer

Jan 2011 - Jan 2013

BPI sports one of the world's leading sports supplement and fitness companies. I managed a small team of web designers and developers that managed and maintained the company's web presence.
